

To help you complete this worksheet, use the *Tropical Fish* book.

## The tropics

Many different kinds of \_\_\_\_\_ live in the sea in parts of the world called the \_\_\_\_\_. The tropics are a warm area near the \_\_\_\_\_. The equator is an imaginary line that goes around the \_\_\_\_\_ of Earth. There are rain forests on the land and \_\_\_\_\_ reefs in the ocean in the tropics. The fish that live in the tropics are called \_\_\_\_\_ fish.

The northern edge of the tropics is an imaginary line called the Tropic of \_\_\_\_\_.

Many fish and other animals in the tropics live in coral reefs. These reefs are like underwater cities where fish swim among the \_\_\_\_\_. Coral grows in many colours, shapes and sizes.

The \_\_\_\_\_ divides Earth in half.

The southern edge of the tropics is an imaginary line called the Tropic of \_\_\_\_\_.
