## Maiasaura

Maiasaura had a flattened beaklike \_\_\_\_\_. Its name means "good mother lizard." Maiasaura laid eggs in a \_\_\_\_\_, as most other dinosaurs did. But unlike some dinosaurs that left their eggs alone to hatch, Maiasaura \_\_\_\_\_ its eggs and fed its babies.

There were as many as \_\_\_\_\_ eggs in a nest.

A mother Maiasaura dug a deep cosy nest in the \_\_\_\_\_ and laid her eggs inside.

The mother dinosaur brought juicy \_\_\_\_\_ to the nest for her babies to eat.

This baby looks like its mother, only much \_\_\_\_\_.
