Water Insects

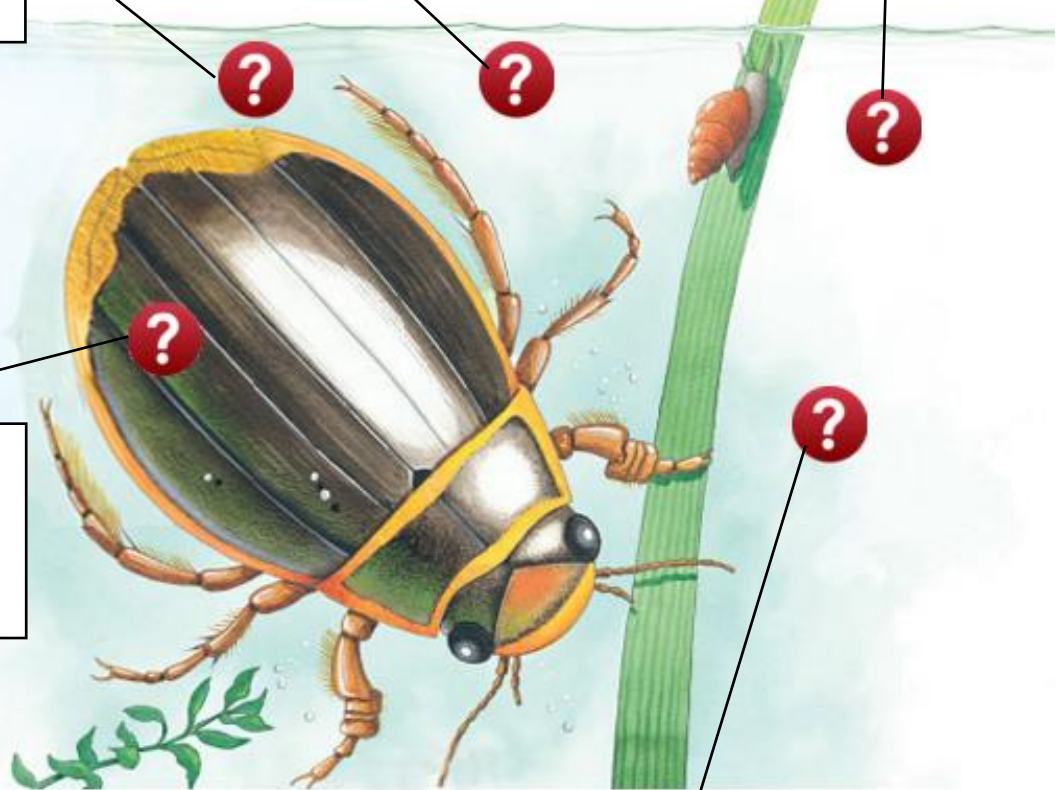

Many insects live in or near _____, where food is plentiful and there are many places to hide from enemies. Here, a large diving beetle is plunging deep into the water to look for _____. It carries a bubble of _____ under its wing cases so it can breathe.

A large _____ beetle can measure up to 4 centimetres long.

The beetle's hairy back legs are shaped like _____. The beetle uses them to swim through the water.

A pond _____ makes a tasty snake for the diving beetle.

A flattened _____ helps the beetle move quickly.

Hooks at the end of the _____ are useful for clinging to slippery underwater plants.
